

mesoestetic®

mesohyal™ ARTICHOKE

FLACCID CELLULITE ASSOCIATED WITH OVERWEIGHT.

mesohyal ARTICHOKE is an anticellulite solution combining artichoke extract with a hyaluronic acid base.

Artichoke extract, also known as *Cynara Scolymus*, enhances significantly the synthesis of the coenzymes involved in anabolic processes reducing adipose tissue.

Its cleansing action stimulates the lymph draining system reducing the retention of fluids built up in the tissues and reduces oedema and the feeling of swelling.

Based on the diagnosis of the patient's aesthetic disorder, **mesohyal ARTICHOKE** is the ideal complement to prepare cocktails with other products from the **mesohyal®** range:

- **mesohyal HYALURONIC**: with skin moisturising and rejuvenating effect.
- **mesohyal NCTC 109**: with intensive biorevitalising effect.
- **mesohyal VITAMIN C**: with antioxidant effect.
- **mesohyal DMAE**: with firming effect.
- **mesohyal BIOTIN**: to reactivate cell metabolism.
- **mesohyal CARNITINE**: to increase energy output.
- **mesohyal MELILOT**: for cellulite with vascular component.
- **mesohyal ORGANIC SILICON**: to regenerate and restructure the skin tissue.

For cocktails with **mesohyal HYALURONIC**, load this first because of its high viscosity. A homogeneous mixture will thus be obtained.

The **TREATMENT** is applied over 20 to 30 minutes, and the patient can return immediately to their activities of daily living. The therapeutic protocol will be based on the patient's degree of cellulite and skin condition, requiring 8 to 12 sessions at intervals of at least 1 week.

Although the reducing action of **mesohyal ARTICHOKE** is immediate and long-lasting, it does not stop the effects of bad habits regarding figure, so regular maintenance treatments will be required every 6/8 months to preserve the skin's healthy appearance. Based on the result obtained, this period may be shortened or prolonged.

mesohyal ARTICHOKE is supplied in 5 ml ampoules. Each ampoule is for single use and for a single patient.

Specifications:

Composition:	Artichoke extract (0,15%) and mineral salts Sodium hyaluronate: · Biotechnological origin / <i>non cross-linked</i> · Concentration: 2,5 mg/ml
Indications of use:	Flaccid cellulite Overweight
Treatment areas:	Artichoke extract is especially indicated to treat the areas mostly affected by flaccid cellulite: anterior side of the thighs, buttocks, abdomen, back, and arms.
Presentation:	Class I 5 ml ampoule (monosilicate glass) Package containing 20 ampoules
Storage conditions:	Keep under 25°C Do not expose to high or low temperatures Avoid direct exposure to light
Injection techniques:	Sterile syringes and needles for mesotherapy techniques / manual or multipuncture gun
Injection depth:	Superficial dermis
