

# mesohyal™ HYALURONIC

## SKIN RE-MOISTURISING AND REJUVENATION.

**mesohyal HYALURONIC** is a gel solution with a high concentration of non cross-linked hyaluronic acid (45 mg / vial). It is not of animal origin, it is obtained by bio-fermentation and it is completely bio-compatible.

Indicated for the treatment of fine wrinkles and general moisturising, **mesohyal HYALURONIC** increases the firmness and elasticity of the skin.

**mesohyal HYALURONIC** is different to traditional wrinkle fillers, which only have temporary effects on wrinkles. It nourishes and moisturises the treated skin area, restoring a healthy and youthful look. Its rejuvenating action produces long-lasting effects, helping to redefine the oval face, smoothing the fine lines and wrinkles of the skin, increasing volume and creating an immediate and natural lifting effect.

### Safety and efficiency

It is injected in the superficial dermis, absorbing itself naturally. As it is bio-compatible, it is for all skin types and has minimal secondary effects.

Based on the diagnosis of the patient's aesthetic disorder, **mesohyal HYALURONIC** is the ideal complement to prepare cocktails with other products from the **mesohyal**® range:

- **mesohyal NCTC 109**: with intensive biorevitalising effect.
- **mesohyal VITAMIN C**: with antioxidant effect.
- **mesohyal DMAE**: with firming effect.
- **mesohyal ORGANIC SILICON**: to regenerate and restructure the skin tissue.
- **mesohyal BIOTIN**: to reactivate cell metabolism.
- **mesohyal CARNITINE**: to increase energy output.
- **mesohyal ARTICHOKE**: to activate lipolytic processes.
- **mesohyal MELILOT**: for cellulite with vascular component.

For cocktails with **mesohyal HYALURONIC**, load this first because of its high viscosity. A homogeneous mixture will thus be obtained.

The **TREATMENT** is applied over 20 to 30 minutes, and the patient can return immediately to their activities of daily living. The therapeutic protocol will be based on the patient's age and skin condition, requiring 5 to 10 sessions at 1 or 2 week intervals.

Although the repairing and antiaging action of **mesohyal HYALURONIC** is immediate and long-lasting, it does not stop the effects of aging, so regular maintenance treatments should be applied every 6 months in order to preserve the healthy appearance of the skin. This period may be shortened or extended based on the results obtained.

**mesohyal HYALURONIC** is supplied in 3 ml vials. Each vial is for single use and for a single patient.

## Specifications:

Composition:	Sodium hyaluronate: · Biotechnological origin / <i>non cross-linked</i> · Concentration: 15 mg/ml
Indications of use:	Intensive moisturising of superficial dermis and epidermis Correction of fine wrinkles Rejuvenation of the skin
Treatment areas:	Especially indicated for the face, neck, neckline and back of the hands, as well as the arms, back, chest, abdomen, periumbilical area, flanks, and thighs.
Presentation:	Class I 3 ml vial (monosilicate glass) Package containing 5 vials
Storage conditions:	Keep under 25°C Do not expose to high or low temperatures Avoid direct exposure to light
Injection techniques:	Sterile syringes and needles for mesotherapy techniques / manual or multipuncture gun
Injection depth:	Superficial dermis
